## Decorative Sandblasting

Glass sandblasting is just one of the extra services that we offer in house. Blasted glass still allows a large amount of light to transmit through the glass, whilst maintaining privacy. Designs can be blasted onto the glass through a vinyl which can be used to create either a negative or positive image for a one-off original design.

Get the privacy you need without sacrificing light, through stunning etched glass art by Olympic Glass. Designs are created through sandblast etching and carving that obscures the glass, diffuses light and eliminates glare – the perfect combination, creating privacy without blocking light, through a beautiful art piece for your home or office.

Sandblasted glass is produced by spraying sand as an abrasive at high velocities over the glass surface which gives the product a varying degree of translucency depending on the blast intensity. This gives the surface a rough texture greater than that obtained by etching, however with a protective coating applied the surface looks and feels like etched glass at a much more reasonable cost.

Olympic Glass creates the finest quality Sandblast etched glass and stained glass, turning any glass product into exquisite “Works of Art Captured in Glass” in unlimited designs and decor styles.

To achieve these looks, the required designs are printed out and laid on the surface of the glass, with the areas that are to remain transparent masked for protection. Sand is then blasted at the product, with the degree of translucency varying based on the coarseness of sand and pressure being used.

Simply provide us with your idea, picture, or corporate logo and let our design team transform your glass requirements into a work of art or simply choose from our library of hundreds of designs that will help bring that splash of colour or feature to any home or business.
